Every phil&teds product is safe.

Recent stories in New Zealand's press highlight the need for continuous quality assurance for China manufactured goods. This doesn't implicate phil&teds as we go to extraordinary lengths to deliver products to 42 country markets and so meet the highest global product safety standards.

Every phil&teds product is safe.

Components are routinely tested and certified, outside of China, to meet or exceed standards of safety (as determined by European, US, Australian and NZ measures), including all plastic, metallic, fabric and painted components.

Tests for toxicity and flammability are:

Standard	Detail	Result
EN1888:2003 and A1, A2 & A3: 2005	all components, including a 'toxic element analysis'	PASS
EN1888:2003 Annex B	Flammability test	PASS
EC directive 2005/84	phthalates (dangerous substance) Testing	PASS
EN71: Part 3: 1974 & A1:2000	Flammability test	PASS

phil&teds has an excellent record for safety.
